Winnebago Brand Introduces an Enhanced Solis Pocket Floorplan with Option to Add Energy Performance Solution Developed in Partnership with EcoFlow

July 20, 2023 at 6:00 PM EDT

FOREST CITY, Iowa, July 20, 2023 –[Winnebago](#)®, the flagship brand of outdoor lifestyle product manufacturer Winnebago Industries, Inc., announced today a new floor plan that improves the living environment in the popular Solis Pocket camper van by featuring a new versatile, multi-functional dinette and rear wet bath—rare for a compact van.

To further enhance the RV experience, consumers can also add the Winnebago x EcoFlow® Power Kit Pro, an advanced power management system developed in partnership with power and renewable energy solutions company [EcoFlow](#)®. This system includes an exclusive 5-in-1 power management controller that consolidates five essential power components into one compact hub that optimizes energy performance. The system comes with a compact 5 kilowatt-hour (kWh) Lithium house battery, which helps save space and reduce vehicle weight. A new digital touchscreen simplifies owner operations.

“Winnebago’s partnership with EcoFlow is another example of our company’s continuous innovation and proven ability to deliver technology that enhances owners’ experiences on the road,” said Winnebago brand President Huw Bower. “The new floor plan, combined with the optional power solution, make the Solis Pocket more versatile, energy-efficient and easier to operate than ever before. It’s just one way Winnebago is giving owners freedom to explore the outdoors on their terms.”

The Solis Pocket 36B is the first and only RV on the market to feature the exclusive 5-in-1 power management controller and Winnebago is the only RV manufacturer that can offer it.

“It’s a privilege to partner with the Winnebago brand to deliver a best-in-class solution that makes it easier and more enjoyable for people to experience the outdoors in an RV,” said Brian Essenmacher, North American Head of Business Development at EcoFlow. “Our companies share a commitment to harness technology and provide superior, cutting-edge products that meet the needs of today and tomorrow. The Winnebago x EcoFlow® Power Kit Pro is a result of that effort.”

Key Features and Benefits of the Solis Pocket 36B

New Standard Features

A customizable, multi-functional dinette that easily reconfigures eight ways to meet a broad range of traveling needs, from entertaining to working. Specific options include:

- **Two Dinette Modes**, allowing conversion from a two- to four-person dinette
- **Travel Mode**, extending the forward-facing dinette cushion towards the passenger side to provide seating for two additional guests. (This option features two three-point seat belts.)
- **Sleep Mode**, giving solo travelers the option to turn the dinette into a single sleeper space spanning 30 inches x 75 inches. This configuration provides access to the coach’s amenities without the need for tear-down. For double bed sleeping, the dinette can extend across the coach, creating a comfortable 53-inch x 75-inch sleeping space.
- **Four Lounge Modes**, offering a 6-foot-6-inch sofa to create a spacious entertainment area; an L-shape sitting space, either forward- or rear-facing; or a day bed that extends the rear-facing dinette to the sliding door.

A rear wet bath provides travelers more convenience, independence and security by obviating the need for public restrooms while on the road. The new design features:

- **More storage and flexibility** for use as a shower or open-space “mudroom” for skis, snow suits or wet gear
- **A portable, easily removable toilet** that creates a larger space to shower
- **A built-in sink with countertop** that enhances livability and provides more functional space for getting ready
- **A medicine cabinet** with a French-style mirror and access to electrical outlets
- **Internal water tanks** that prevent water from freezing, giving the camper extended-season capability

New Optional Winnebago x EcoFlow® Power Kit Pro

The exclusive 5-in-1 power management controller optimizes energy efficiency, simplifies vehicle operations and enhances the overall ownership experience by replacing five essential power components—inverter, shore power converter, battery energy converter, solar energy converter, and

alternator energy optimizer—into a single system. In addition, this groundbreaking solution:

- Provides **best-in-class power generation up to 3,600 watts** —enough to easily power multiple appliances at the same time
- **Reduces shore-power charging time** by 50 percent, compared with the standard power systems
- Can **plug-and-play up to two additional batteries**, which owners can easily install and connect without custom wiring
- Offers several performance enhancements vs. the standard EcoFlow Power Hub, including:
 - **40-percent faster lithium house battery recharging** from the vehicle engine through the Alternator Energy Optimizer
 - **Faster battery recovery time** if the battery overheats in extreme conditions
 - **More simplified and intuitive user interface** on the digital control screen

A **compact 5 kWh Lithium house battery** is integral to the Power Kit Pro and provides numerous benefits. It:

- Fits under the dinette seat, saving space and reducing weight in the compact camper van
- Enables up to three days of boondocking or off-grid living in favorable weather conditions
- Eliminates the need for a gas or LP generator
- Operates the air conditioner (A/C) for up to five hours
