Winnebago Industries, Inc. Conflict Minerals Report for the Year Ended December 31, 2014

Introduction

The "Company," "Winnebago Industries," "we," "our" and "us" are used interchangeably to refer to Winnebago Industries, Inc. and its subsidiary, Winnebago of Indiana, LLC, as appropriate in this context.

This Conflict Minerals Report of Winnebago Industries, Inc. for calendar year 2014 is presented in accordance with Rule 13p-1 ("Rule 13p-1") under the Securities Exchange Act of 1934 (the "1934 Act"). Please refer to Rule 13p-1, Form SD and the 1934 Act Release No. 34-67716 for definitions to the terms used in this Report, unless otherwise defined herein.

Winnebago Industries, a manufacturer of recreation vehicles, has determined that its products were manufactured with tin, tantalum, tungsten, and gold which were necessary to the functionality of such products. In accordance with the rules, Winnebago Industries performed due diligence as noted below to determine the conflict minerals status of the necessary conflict minerals used in its product manufacturing.

Due Diligence

Design of Due Diligence:

Winnebago Industries has reviewed their suppliers and sourcing decisions and integrated into their management programs the Organization for Economic Cooperation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas: Second Edition ("OECD Framework"), an internationally recognized due diligence framework. Specific details on the due diligence framework and compliance efforts are listed below.

Due Diligence Measures Performed:

1. Establish strong company management systems:

In accordance with the execution of this rule, Winnebago Industries has concluded in good faith that,

- a) We have clearly communicated to all suppliers our efforts to comply with Rule 13p-1.
- b) We have structured compliance efforts internally to support supply chain due diligence. Winnebago Industries has developed a team responsible for the conflict minerals program. The team reports to the CFO.
- c) We have established a system of controls and supply chain transparency through the adoption and use of due diligence tools created by the Electronic Industry Citizenship Coalition and the Global e-Sustainability Initiative (EICC/GeSI). This included the use the Conflict Minerals Reporting Template (CMRT), a supply-chain survey.
- d) We have conducted a supply-chain survey, which requested suppliers to identify smelters and refiners, using the CMRT. As a downstream manufacturer, we rely on our vendors to provide the origins of all of our conflict minerals, including the location of the smelter, mine, or transit route of the minerals.
- e) When applicable, we compared smelters and refiners identified by the supply-chain survey against the list of facilities which have received a DRC conflict free designation from the Conflict Free Smelter Program (CFSP) or other independent third-party smelter audit programs.

2. Identify and assess risk in the supply chain:

We identified risks at the product level and determined that all products we produce contained conflict minerals necessary to the functionality of the product. As we progress, we expect that transparency in our

supply chain will increase which will allow for better risk assessment at more detailed levels within our supply chain.

Based on the assessed risks, Winnebago Industries performed a reasonable country of origin inquiry (RCOI) over all tier one suppliers to identify the smelters/refiners of conflict minerals.

3. Design and implement a strategy to respond to identified risks:

Our RCOI strategy was reasonably designed and implemented to determine the existence and source of conflict minerals in Winnebago Industries' supply chain, including recycled or scrap materials. We utilized the EICC/GeSI template for our RCOI, but comparable forms of documentation were also accepted. We conducted our efforts to send surveys in good faith, utilizing two rounds of communications with our suppliers through April 2015. We evaluated survey responses to identify: (i) the use and source of Conflict Minerals; and (ii) any warning signs indicating that Conflict Minerals may have come from the Democratic Republic of the Congo or an Adjoining Country. We made additional inquiries on a case-by-case basis to clarify or obtain more information as necessary. Additionally, we compared the listing of smelters and refiners per the vendor survey to the Conflict Free Sourcing Initiative's Conflict Free Smelter and Refiner lists.

Based on the surveys provided and notifications that our suppliers' diligence efforts were incomplete, we do not have sufficient information to conclusively determine all smelters/refiners or countries of origin of the conflict minerals. Our efforts to determine mine or location of origin and future due diligence activities will continue to be assessed and improved. Results of supply chain due diligence were tracked and reported to senior management during periodic status meetings. Final determinations were reviewed to support due diligence conclusions.

4. Carry out independent third-party audit of supply chain due diligence at identified points in the supply chain:

We support the industry associations which administer independent third-party smelter audit programs that we rely upon.

5. Report on supply chain due diligence:

We have developed and communicated a company policy. Management's conflict minerals compliance results are reported annually with the SEC and are made publicly available on our website. Additionally, we have responded to customer inquiries for information when requested.

Steps to Improve Due Diligence Measures

Based on our survey assessment, Winnebago identified 80 potential suppliers providing conflict minerals from 311 smelters and refiners. There were numerous suppliers that did not provide smelters and refiners used and a substantial group of other suppliers that did not provide a response to our survey.

Winnebago plans to undertake the following steps during 2015 to improve due diligence procedures in order to further enhance transparency and reduce risk that the conflict minerals which are necessary to our products benefit armed groups in a covered country, including:

- Continue to assess presence of conflict minerals in supply chain
- Clearly communicate expectations with new and delinquent suppliers
- Continue to improve risk mitigation strategy
- Further evaluate supplier relationships

Product Description:

All products manufactured by Winnebago Industries are deemed to contain conflict minerals necessary to the product's functionality. We produce products that include motorhomes, touring coaches, transit buses, travel trailers and fifth wheel trailers as well as supporting RV products. We do not currently have sufficient information to

disclose all smelters and refiners or countries of origin or whether the conflict minerals are from recycled or scrap sources. However, based on the data provided by the ROCI, this information has been listed in Annex I and II, respectively. The majority of our suppliers reported conflict minerals use at the company level, not at the product level. As such, we cannot definitively state whether these conflict minerals were included in the products provided to Winnebago, or further validate that these smelters or refiners exist in our supply chain.
